

LED Coffee Table

Jin Hun Kim, Edward Lai, Matthew Miller

Our Goal

Design and build a 2D LED matrix that reacts to objects placed on a glass table above it

Video!

Stuff we used

FRDM-KL25Z (mbed)

TSOP38238 IR Receiver

NeoPixel LED lights

2N3904 NPN Transistor

CD74HC4067 multiplexer

Aluminum foil

IR204-A IR Emitter (940nm)

Lots and lots of wires

Wiring...

How it works

- IR emitters
 - send infrared light up through glass
- IR receivers:
 - If an object reflects light, triggers four leds

Prototype

Problems we faced

Multiplexer timing

Wiring

Hardware x_x

Lessons Learned

- Better Design Phase
- Prototyping
- Power considerations

Next Steps

Improve granularity of lights

Ripple effects

Visualizer

External power source

Change IR receivers to different frequencies

Tetris?!?!?!?

Online works used

Multi_WS2811 - NeoPixel Library, Ned Konz

IR and RF remote controls handbook - Jim Hamblen
